Ceris 2 Subd, Canlubang,
Calamba city, Laguna

ABOUT ME

I am a Computer Science student with strong interests in artificial intelligence, machine learning, and software development. I am also experienced in developing data driven dashboards, machine learning models, and web based systems using Python, Flask, and Jupyter Notebook. Actively involved in university research initiatives focused on innovative technology solutions.

EDUCATION

College, Mapua Malayan Colleges Laguna, Cabuyao

2022 - Present

- Dean's Lister for 8 terms
- President's Lister for 1 term

SHS, Mapua Malayan Colleges Laguna, Cabuyao

2020-2022

- Graduated with High Honors
- Principal's Lister

JHS, Don Bosco Canlubang, Calamba

2016-2020

- Graduated with Honors
- Bronze Medalist

ACADEMIC INVOLVEMENT

IAN Research Team Member, CCIS

Mapua Malayan Colleges Laguna

SKILLS

- Python
- Machine Learning
- Web Design and UI/UX Prototyping (Figma)
- Flask Web Development
- Data Visualization (Chart.js)
- YOLO Object Detection
- SQL Database Management
- Microsoft Office (Word, Excel, PowerPoint)
- Research and Technical Documentation
- Adobe Photoshop

PROJECTS

Student Attendance Management System (SAMS)

2025 - Present

- Developing an automated attendance tracking system using AI powered facial recognition to identify and track student attendance in real time.
- Implements computer vision techniques to detect and recognize student faces for accurate attendance recording.
- Generates automated attendance reports for teachers, parents, and students through a centralized dashboard.

Tuberculosis Web Support

2025

- Developed a machine learning based tuberculosis screening system that predicts the probability of infection based on user reported symptoms.
- Implemented an AI assisted chatbot connected to a database to guide users through symptom based assessments and store patient responses.
- Built an interactive analytics dashboard using Flask and Chart.js to visualize tuberculosis assessment data.
- Implemented visualizations including TB outcomes, gender distribution, and time based trends to support data driven analysis.

Employee Performance Monitoring System

2024 - 2025

- Developed a web based system for monitoring and evaluating employee performance.
- Designed the user interface and system flow, including dashboards and evaluation modules.
- Implemented role based access for administrators and employees to manage agreements and evaluations.

Mobile Game Development

2021 - 2023

- Developed a turn based RPG game in C# featuring story progression, crafting mechanics, and summoning systems.
- Created a 2D shooting game inspired by Space Invaders with AI controlled enemies.
- Implemented gameplay mechanics, game logic, and player interaction systems.
